

Associate Software Engineer Job Description

Impetus Technologies is a software products and services company focused on creating powerful and intelligent enterprises through deep data awareness, data integration and advanced data analytics. Our products and services are designed to empower the real-time data driven enterprise, to help our clients win in the modern world of digital transformation.

Impetus is proud to partner with such Fortune 100 clients as American Express, Bank of America, Capital One, Fannie Mae, McKesson, Toyota, United Airlines, Verizon and more. The company is headquartered in Los Gatos, California with international offices in India, Australia and Canada.

What we are looking for

Those who are passionate about technology, motivated for continuous learning and should view every customer interaction as an opportunity to create an exceptional customer experience. You take satisfaction in building resilient, performant, and thoroughly tested distributed systems that can power the most business-critical applications. You get stuff done and thrive in a performance oriented environment. You have a strong sense of ownership and a curiosity to understand how things work, even if they take you outside your area of expertise. You welcome feedback and are constantly looking for ways to improve yourself.

BASIC QUALIFICATIONS

- Bachelor's/ Master's degree in Computer Science, Computer Engineering or related technical discipline
- Strong, object-oriented design and coding skills (Java, Python, C/C++)
- Good understanding of distributed systems, algorithms and relational databases
- Excellent verbal and written communication skills
- Ability to troubleshoot and identify the root cause of issues.
- Ability to achieve goals in a highly innovative and fast paced environment
- Ability to design and code right solutions starting with broadly defined problems.

You would be responsible for

- Design and implementation of scalable, low-latency, high-availability, and performant application/architecture
- Driving best practices and engineering excellence.
- Working with other team members to develop the architecture and design of new and current systems.
- Working in an agile environment to deliver high quality software.
- Designing and building functional components, including code reviews, testing, deployment and post-launch monitoring
